A Conceptual Model for Healthcare Facility Design

Stichler, J. F. 2015 | *Journal of Nursing Administration* Volume 44, Issue 6, Pages 321-325

Key Concepts/Context

This study article presents a conceptual model to explain the interrelationships among healthcare design elements.

Methods

No method was presented in this article.

Findings

No findings were presented in this article.

Design Implications

This conceptual model provides a framework for understanding linkages among healthcare design elements. It is useful in identifying data that can be collected when a healthcare design project is initiated and completed.

Limitations

The conceptual model presented in the article is an opportunity to visualize relationships between concepts or variables of interest. It is less formal than a theoretical framework and has not undergone the same rigorous testing.
